

Student to School Psychologist Ratio 2020–2021

Based on the US Department of Education Common Core of Data

The data used in the calculation of ratios were provided to the US Department of Education by state departments of education. These data are provisional and we are aware that these numbers may not align with other sources of data. NASP will be monitoring these data and will update this graphic should new information become available.

The National Association of School Psychologists recommends a ratio of 500:1.

Note. Data from U.S. Department of Education, National Center for Education Statistics, Common Core of Data (CCD), "State Nonfiscal Public Elementary/Secondary Education Survey," 2020–2021 V.1a.

* Data for 2020-2021 are unavailable for Illinois and Utah, and ratios were imputed from 2019-2020 data. American Samoa reported no data for 2019 or 2020. Ratios for Alabama, Mississippi, New Mexico, and Puerto Rico were greater than 7,500 students per school psychologist.
